In Michael Newton's first two books, *Journey of Souls: Case Studies of Life Between Lives* and *Destiny of Souls: New Case Studies of Life Between Lives*, you get to witness his ground-breaking discovery of the existence we live between lives. Through many case studies, Dr. Newton paints a vivid picture of life between lives, shattering many commonly-held beliefs about the nature of God, the Universe and our reason for being. As editor of *Memories of the Afterlife: Life Between Lives Stories of Personal Transformation*, he continues the journey but this time through the efforts of 32 experienced practitioners from all over the planet who completed their training at the Michael Newton Institute. Their stories are no less fascinating as they enhance the credibility of the earlier works by repeating and reinforcing this shared glimpse of the afterlife. The case studies represent a variety of life situations, all with the powerful life-changing insights that can only be gained by remembering who you truly are, why you came here and with whom you are sharing the ride. Although certainly not a pre-requisite, if you haven't read *Journey/Destiny of Souls* I recommend you do so as these classics will explain things in a bit more organized and detailed fashion and will help fill in the blanks.

It's time, I think, to consider the question of the evidence of reincarnation. There are two main bodies of evidence, spontaneous memories and evoked memories (both well summarized in "Lifecycles: Reincarnation and the Web of Life" by Christopher M. Bache). Spontaneous memories are the accounts of young children who remember pieces of previous lives and are able to

recognize people they have never met and towns they have never visited. Ian Stevenson is the most prolific of the researchers in this field having documented hundreds of cases in numerous countries. A fascinating recent entry is "Soul Survivor" by Andrea & Bruce Leininger telling the story of their two year old son remembering his previous life as a World War II pilot shot down in the Pacific. Evoked memories are memories most frequently elicited by hypnotic regressions of the type described in "Memories of the Afterlife". By now there are thousands of mutually reinforcing case histories. Michael Newton's work is a major contribution to this evidentiary pillar. If you examine all this evidence dispassionately, you might well wonder why reincarnation has not been embraced by the scientific community and society at large as accepted fact. The main reason seems to be that from early on, it was strongly suppressed by organized religions as a threat to their exclusive agency of the divine. As an example, Christianity excluded reincarnation from its orthodoxy at the Fifth Ecumenical Council in A.D. 553. It seems that this discouragement has cast a long shadow across the centuries. Michael Newton has built his career concentrating on what happens after we die and before we are re-born, the Afterlife.
