Storm World: Hurricanes, Politics, And The Battle Over Global Warming

Synopsis

Are hurricanes increasing in ferocity and frequency because of global warming? In the wake of Katrina, leading science journalist Chris Mooney follows the careers of top meteorologists on either side of this red-hot question through the 2006 hurricane season, tracing how the media, special interests, politics, and the weather itself have skewed and amplified what was already an intense scientific debate. In this fascinating and urgently important book, Mooneyâ "a native of New Orleansâ "delves into a compelling consequence of the great inconvenient truth of our day: Are we responsible for making hurricanes even bigger monsters than they already are?

Book Information

Paperback: 416 pages

Publisher: Mariner Books; Reprint edition (August 4, 2008)

Language: English

ISBN-10: 0156033666

ISBN-13: 978-0156033664

Product Dimensions: 7.9 x 6.9 x 1 inches

Shipping Weight: 15.2 ounces

Customer Reviews

"Storm World: Hurricanes, Politics, and the Battle Over Global Warming" is the best science book of 2007 which I have read so far, and one which clearly deserves all the praise it has earned already. It is an exceptional piece of science journalism which should earn awards for journalist Chris Mooney, the science writer for the Washington, DC-based SEEDS magazine. It is even more impressive a piece of brilliant scientific journalism when you realize that both the author and the magazine he works for have a strong liberal bias - which admittedly was quite apparent in his previous book "The Republican War On Science" - and yet, to his everlasting credit, Mooney has endeavored quite well to ensure that his book remains as nonpartisan as possible, treating with ample respect, all of the principal players depicted, from flamboyant Colorado State University meteorologist William Gray - a staunch critic of global warming - to MIT theoretical meteorologist Kerry Emanuel - among those who recognize a potential link between global warming and hurricane intensity and severity - to

Georgia Tech climatologist Judith Curry, a co-author of an important recent paper which may support such a potential linkage. Without question, Mooney's book is a revealing, often insightful, examination of Hurricane meteorological research from 2004 to 2006 and of the relevant political and media issues which become associated with it, regrettably in the aftermath of the widespread destruction caused by Hurricane Katrina. Mooney offers a vivid portrayal of the history of meteorology, emphasizing research on hurricanes, from the early 19th Century to the present, in the first third of his book.
